

Pressure sensor module

Up to 1,000 bar

Model MTF-1

WIKA data sheet PE 83.01

Applications

- Sensor integration projects
- Battery-operated applications
- Applications with high pressures of up to 1,000 bar [15,000 psi]
- Implementation of condition monitoring

Special features

- Compact design for limited mounting spaces
- Low energy consumption reduces maintenance effort
- Dry, welded measuring cell from stainless steel for aggressive media
- Additional temperature indication for condition monitoring

Description

The model MTF-1 pressure sensor module is a simple and flexible option for integrating pressure measurement into a wide variety of applications. The pressure value is digitally processed in the module and output as a standardised digital or analogue signal. Thus, the MTF-1 module delivers precise data for applications with pressures of up to 1,000 bar. Adjustment of the output signal is carried out by WIKAI at the factory, meaning time and cost expenditure for calibration during integration is eliminated.

Low energy consumption reduces maintenance effort

The model MTF-1 pressure sensor module is designed for energy-saving operation. The digital I²C signal transmits data extremely efficiently thanks to low basic energy consumption and fast switch-on times.

The energy-efficient sleep mode further reduces energy consumption. This makes the module particularly suitable for battery-operated solutions, ensures long cycles between battery changes and thus reduces maintenance costs.

Fig. left: Pressure sensor module, spanner width 19 mm
Fig. right: Pressure sensor module, spanner width 27 mm

Dry, welded measuring cell from stainless steel, also for aggressive media

The dry, stainless steel measuring cell is welded to the process connection and can therefore also be used with aggressive media. Even after long periods of use with many load cycles, the dry measuring cell of the model MTF-1 only exhibits a low signal drift – and ensures a permanently reliable data basis.

Additional temperature indication for condition monitoring

In order to evaluate the condition of the sensor, in many applications a temperature indication is helpful. Thanks to the digital I²C protocol, parallel to the pressure signal, the model MTF-1 provides a guideline value for the temperature in the sensor module, which can be used for condition monitoring of the instrument. With condition-based and preventive maintenance made possible by this, the service life can be significantly extended and repairs can be planned ahead.

Explosion protection

Optionally, the model MTF-1 is available with ATEX and IECEX approval.

Specifications

The model MTF-1 features a pressure output as standard. In versions with the I²C output signal the pressure sensor module has an additional temperature output. The following specifications refer to the pressure outlet. For details on the temperature output, see table "Optional temperature output".

Optionally the model MTF-1 is available with an improved non-linearity. Depending on the selected non-linearity the following values result:

Accuracy specifications	Non-linearity $\leq \pm 0.25$ % of span	Non-linearity $\leq \pm 0.125$ % of span
Non-linearity per BFSL per IEC 62828-1	$\leq \pm 0.25$ % of span	$\leq \pm 0.125$ % of span
Accuracy	→ See "Max. measuring deviation per IEC 62828-1"	
Max. measuring deviation per IEC 62828-1	$\leq \pm 0.5$ % of span	$\leq \pm 0.25$ % of span ¹⁾

1) With I²C only possible with oversampling ≥ 4

Further details on: Accuracy specifications	
Signal noise	$\leq \pm 0.2$ % of span
Non-repeatability per IEC 62828-1	<ul style="list-style-type: none"> ■ ≤ 0.1 % of span for analogue signals and I²C with oversampling ≥ 4 ■ ≤ 0.15 % of span for I²C with oversampling < 4
Influence of supply voltage	Max. ± 0.1 %/10 V (for signal 1 ... 10 V)
Max. temperature error	→ See below
Long-term drift per IEC 62828-1	$\leq \pm 0.1$ % of span
Reference conditions	Per IEC 62828-1

Temperature error

For pressure ranges < 10 bar/150 psi, a higher temperature error at below -20 °C [-4 °F] and above 60 °C [140 °F] must be taken into account.

Measuring ranges, gauge pressure

bar	
0 ... 10	0 ... 160
0 ... 16	0 ... 250
0 ... 25	0 ... 400
0 ... 40	0 ... 600
0 ... 60	0 ... 1,000
0 ... 100	

psi	
0 ... 100	0 ... 1,000
0 ... 150	0 ... 1,500
0 ... 160	0 ... 2,000
0 ... 200	0 ... 3,000

Measuring ranges, vacuum and +/- measuring range

bar	
-1 ... +9	-1 ... +24
-1 ... +15	

psi	
-14.5 ... +160	-14.5 ... +300
-14.5 ... +200	

Other measuring ranges on request.

Further details on: Measuring range

Overpressure limit ¹⁾

Measuring ranges ≤ 600 bar/7,500 psi	2 times
Measuring ranges > 600 bar/7,500 psi	1.43 times

Vacuum resistance	Yes
--------------------------	-----

1) The overpressure limit is based on the sensor element used. Depending on the selected process connection and sealing, restrictions in overpressure limit can result. With increased overpressure limit there are deviations in temperature error and long-term stability.

Process connection

Standard	Thread size	Max. measuring range	Overpressure limit	Sealing
EN 837	G 1/8 B	400 bar [5,800 psi]	572 bar [8,290 psi]	Copper
